

“The biggest threat board members and executives face today is simply not **knowing** what the latest **threats** really are.”

Jim Stickley

Executive

Business executives and their board members face a never ending challenge of keeping up with the latest security threats. Often third party solutions are required to address these concerns but with such a large range of options and price points, it's often difficult choosing the right solution at the right price.

In addition, results from risk assessments, penetration tests, IT audits and other security assessment reports can often leave the executives with more questions than answers. SoS Executive is the first and only information security advisor designed specifically for board members and executives. Through this offering, board members and executive staff are kept current with the latest security threats that impact their financial institution.
